Construction Catering Services Environmental Policy

Background:

In order to minimize the impact of Construction Catering Services (CCS) upon the environment we undertake to comply and in most cases try to exceed environmental regulations. By protecting and enhancing the environment not just where CCS works, but through our associated business partners we will contribute to protecting and enhancing the wider environment.

CCS Environmental Policy:

At CCS we aim to safeguard the environment by:

- Following our waste management and recycling policies: provide effective waste management, encourage waste reduction
- Provide recycle bins and reduce general waste bins in our canteens
- Reducing the use of natural resources such as using non-paper based systems where practical, ie: email/web-based communications
- Reducing energy consumption such as turning off equipment, heating and lighting when not needed
- Encourage sustainable transport used by our staff and local suppliers to reduce our carbon footprint.
- Work with other businesses/relevant local authorities to maximise potential in all areas of safeguarding the environment.
- Encourage water drinking for health reasons but discourage use of water that is bottled off-site.
- Endeavor to enhance the environment which surrounds our canteens
- Effectively monitor and regularly review our activities to ensure they comply with our environmental guidelines and comply with all relevant present and future environmental legislation.
- Understands that in order of this policy to be effective, CCS staff must be properly trained and motivated and partnerships with others are pursued.
